or ameliorating a medical condition in a mammalian subject Human proteins and DNA encoding sequences useful for preventing, e.g. arthritis and cancer -

Claim 20; Page 286; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides. The polypeptides, methods of detecting the nucleotides against the polypeptides, methods of detecting the nucleotides. The polypeptides of the invention have homology to known proteins, thereby polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; has activity; tissue growth activity; has memanopolesis regulatory activity; tissue growth activities; memanomodulatory activity; activin- or inhibin-related activities; chemotactic or chemotyperior activities; haemastopatic or thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis.

Involved in oncogenesis, cancer cell proliferation or metastasis.

Depending on their bolodical activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., imyeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthitis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial isofamenta, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound repair (or nucleic acids encoding them) may be used to promote wound immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders.

Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells and received the annipulate can be used to reconstince and proved factor activity may be used to an encoding them and the statement of viral and the statement of any polypeptides may be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.

proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                    The present invention provides the protein and coding sequences of novel

The present invention describes a cell surface protein which is an L-type amino acid transporter-1 (LAT1), which mediates the transport of neutral amino acids, leucine, isoleuchne, phenylalamine, methionine, tyrosine, tryptophan, valine and histidine, into the cell independently of sodium ions. The LAT1 protein conjugates with the cell membrane surface molecule 4F2. Antisense DNA or RNA, antibodies, antibodies, fragments, and peptide and non-peptide antagonists to LAT1 are useful as anticancer agents. The present sequence represents human LAT1, which is specifically claimed in the present invention.

```
The present invention describes a cell surface protein which is an 1-type amino acid transporter-1 (LAT1), which mediates the transport of neutral amino acids, leucine, isoleucine, phenylalanie, methionine, tyrosine, tryptophan, valine and histidine, into the cell independently of solium ions. The LAT1 protein conjugates with the cell membrane surface molecule 4E2. Antisense DNA or RNA, antibodies, antibody fragments, and peptide and non-peptide antagonists to LAT1 are useful as anticancer agents. The present sequence represents rat LAT1, which is specifically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 298 GACGCCTTTTCAGGAAGAGGCCTTTTCAGGAAGAGAAAGTGCAGCTGAAGAGAAA 357

This sequence represents a rat neutral amino acid transporter, LAT1. It interacts with a 520 amino acid protein (AAYS0427) to effect neutral amino acid transport. LAT1 is predicted to have up to twelve transmembrane domains from hydropathy analysis. The protein, and nucleic acids encoding it are useful for the in vitro analysis of drug permeation through cell membranes and blood tissue barriers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         131 PheLeuLysLeuTrpIleGluLeuLeuIleIleArgProSerSerGlnTyrIleValAla 150

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer -

Claim 20; Page 308-309; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The Invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, or polypeptides, methods of identifying compounds which indides against the polypeptides, methods of identifying compounds which polypeptides of the invention have homology to known proteins, thereby polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may differentiation activities, including cytokine, cell proliferation or cell alfernitation activities; stem cell growth factor activity; immunomodulatory activity; activity; tissue growth activities; chemicatelic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, hemmatopoietic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and

```
repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithalial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    426

treatment and prevention of cancer, inflammatory/autoimmune disorders and cell proliferation disorders -

Claim 1; Fig 1A-F; 32pp; English.

This represents a human amino acid permease homolog (AAPH). The AAPH nucleic acid, protein, AAPH (ant)agonists are useful in the diagnosis, treatment and prevention of cancer such as adenocarcinoma, leukemia, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, and cancers of the adrenal gland, bladder, bone, bone marrow, brain, breast, cervix, gall bladder, ganglia, gastrointestinal tract, heart, kidney, liver, lung, muscle, ovary, pancreas, parathyroid, penis, prostate, salivary glands, skin, spleen, testis, thymus, thyroid or uterus; inflammatory/autoimmune disorders such as AIDS, Addison's disease, adult respiratory distress sydrome, alleries, ankylosing spondylitis, amyloidosis, anemia, emphysema, multiple sclerosis, osteoarthritis, osteoporosis, rheumatoid arthritis, ulcerative colitis, viral, bacterial, fungal, parasitic, protozoal infections; and cell proliferation disorders such as actinic, keratosis, cirrhosis, arteriosclerosis, myelofibrosis, and primary thrombocythemia. asthma, atherosclerosis, autoimmune hemolytic anemia, autoimmune thyroiditis, bronchitis, cholecystitis, contact dermatitis, diabetes mellitus, Crohn's disease, atopic dermatitis, dermatomyosistis,

```
This sequence represents a human amino acid permease homologue (AAPH). The protein can be expressed by standard recombinant methodology, AAPH polynucleotides and polypeptides are useful for diagnosis, treatment and prevention of cancer e.g. adenocarcinoma, lung cancer, ovarian cancer; inflammatory/autoimmune disorders e.g. AIDS, Crohn's disease, rheumatoid arthritis; and cell proliferation disorders e.g. arteriosclerosis, psoriasis, hepatitis. AAPH polynucleotides are useful in gene therapy, in PCR-based methods for detecting upstream sequences, and also for generating hybridisation probes for mapping the naturally occurring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              549
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            310 GGAAGAGGCCTTTTCAGGAAGAGAGAAGTGCAGCTGAAGAGGAAAGTCACTTTACTG 369

This invention describes a novel protein MONP-2 (I) and its encoding gene monp-2 (II) with a cell proliferation promoting effect isolated from a human peripheral blood. The new protein (I) and gene are useful in studying the expression abnormality and dysfunction of (I) as well as maintenance of immune function and development of drugs for e.g. immune diseases and cancers. This represents encodes the MONP-2 protein described in the method of the invention.

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

This invention relates to a neutral amino acid transporter having broad substrate selectivity to neutral amino acids, and which is inactivated by an amino acid transport activating factor 4f2he (4f2 heavy chain). The neutral amino acid transporter and its gene are useful in in vitro analysis of permeation of drugs and poisons through cell membrane, blood and tissues. The present sequence represents the rat L-type amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Neutral amino acid transporter; amino acid transport activating factor; 4F2hc; 4F2 heavy chain; drug permeation; poison; rat; LAT2; L-type amino acid transporter 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A neutral amino acid transporter having broad substrate selectivity useful for in vitro analysis of permeation of drugs and poisons through

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences.
                                                                                                                                                                                                                                                                                              (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               172 IleCysValLeuThrLeuIleAsnCysTyrAsnValLysTrpValThrArgValThrAsp 191

AAC AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activitiess such as: cytostatic; hepatotropic; vulnerary; artiporalatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; artidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the proteins and nucleic acids may be used to treat cancers; proliferative disorders, neurodegenerative disorders, osteoarthritis, graft disease, cardalovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoingmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, coagulation; to inhibit thrombosis; and as a contraceptive.
                    cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autofimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;
cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      262 AAGGAGCCACCTGGGCAGGACGCCTTTTCAGGAAGAGACGCCTTTTCAGGAAGAGACGCC 321

The present sequence is a membrane transport protein,

MTRP-6 from Incyte clone 2414415 isolated from human HNT3AZTO1 cDNA

Library. WRRP-6 shows homology to human amino acid transporter and

SLC7A8. It is expressed in reproductive and nervous tissues.

The present sequence is useful in diagnosis, prevention and treatment
of disorders related with increased or decreased expression of MTRP
c such as familial goitre, Menkes disease, diabetes, Parkinson's disease,
c schizophrenia, immune/inflammatory disorders such as AlDS, Addison's
c helminthic infections and cell proliferative disorders such as cancer.
Fragments of WTRP polymucleotides are useful as targets in microarrays.

WTRP DNA is also useful for generating hypridisation probes useful in
c mapping genomic sequences and detecting differences in sequences among
c screening libraries of compounds in drug screening techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                epilepsy,

The neutral amino acid transporter and its gene are useful in in vitro analysis of permeation of drugs and poisons through cell membrane, blood and tissues. The present sequence represents the human L-type amino acid transporter 2 (LAT2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A neutral amino acid transporter having broad substrate selectivity useful for in vitro analysis of permeation of drugs and poisons through cell membranes, blood and tissues -
